INTRODUCTION

Hosiery industry in West Bengal state consists of tiny units engaged separately in different sectional activities i.e. knitting, processing, cutting and stitching. There are also few composite units working under private management.

Knitting units are mostly tiny both in terms of number of machines and size of their work force. They mostly operate on contract basis, knit fabric for the traders, who supply yarn and get knitting charges.

There is a wide variation in plant and machineries in use and adopted method of processing. Primitive machineries like “Vatti” to modern machineries like Winch, Jet Dyeing machine etc. are in operation. From production point of view, there are two types of units :-

- (i) for Bleaching and Calendering; and
- (ii) for Bleaching, Dyeing and Calendering

These units are mostly working on contract basis.

The cutting units, like other segments of the industry are also tiny in size and exclusively labour oriented. This is being a manual

and skilled operation, no machinery is generally used in direct processing. Operations of the unit are dependent on human skill.

The stitching units, like other segments of the industry are also tiny both in size and employment. Almost all the units work on job basis on the orders from the traders, the brand name owners.

Implementation of suitable projects and preparation of a reliable project profile on opportunities available in Small Scale Sector is the most vital component of information. Accordingly, cost and marketing strategies are based on perceived conditions at Kolkata. Efforts are made to meet this requirement by the Office of the Textile Commissioner, Ministry of Textiles, Government of India, New CGO Building, 48 New Marine Lines, Mumbai-400 020 and its Regional Offices set up across the country whose basis function is to provide a reliable information to the existing and prospective entrepreneurs. The present project report on hosiery products strives to meet the specific entrepreneurial need. These project profiles may be treated and used as a preliminary guide only.
